RESCUE

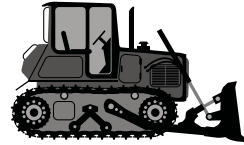

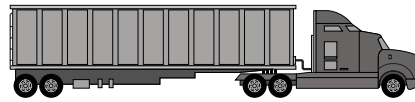

Portable Power Pack

PRODUCT SPECIFICATIONS

12V/24V
A Wake-Up Call for the
Toughest Diesels

Model
6000

If 2,000 cold cranking amps won't start your engine, then the problem isn't in the electrical system.

Welcome to Brute Power, delivered courtesy of the Rescue 6000 portable power pack. Inside, two group 31 batteries of your choice work in tandem to deliver up to 2,300 CCA at 12V or about half of that at 24V. You want to start something big? This is what you need.

The power is delivered through twin copper 1/0 welding cable—equivalent to 4/0—equipped with 800 amp clamps wired so both jaws are hot. Pro quality analog voltmeter is provided along with an auxiliary power outlet SB connection on the side of the unit. There's a 3 stage, automatic 8 amp battery charger, and entire unit is balanced to move easily on pneumatic tires.

Anything bigger than this wouldn't be a power pack, it would be a power plant.
